Agi

(Lahontan cutthroat trout)

- ✿ Can be found throughout much of the northern hemisphere
- ✿ THREATENED SPECIE
- ✿ Native
- ✿ Body color is highly variable
- ✿ Back is steel grey to olive-green
- ✿ Sides are yellow-brown with red or pink along the belly
- ✿ There are yellow, crimson-red or orange slash marks on either side of the jaw (hence the name “cutthroat”)
- ✿ They have scattered round and black spots which are more closely grouped towards the tail
- ✿ Have a unique ability to survive in alkaline (basic) and saline (salty) water of the remnant Great Basin lakes
- ✿ Spend most of their lives in lakes, but spawn (reproduce) in streams
- ✿ Listed as an endangered species in 1970 and reclassified as a threatened species in 1975
- ✿ Largest freshwater trout in North America
- ✿ Can grow to weigh 40-60 pounds
